

# Revolutionary Security

*Your Trusted Partner for  
Proactive Cyber Defense*

## *About Us*

---

*Revolutionary Security* is an experienced and talented team of cyber security professionals whose mission is to provide our clients with the knowledge and expertise to defend their enterprises against cyber threats. Our cyber security consulting and advisory services focus on helping our clients evolve their capabilities across the entire spectrum of people, process, and technology. Revolutionary Security was established by a team whose expertise comes from Defense and Intelligence Community experience and over a decade of tailoring solutions to protect Fortune 500 / Global 1000 companies from all cyber threats.

## *Our Services*

---

Our cyber security consulting and advisory services are designed to transcend current practices and provide resiliency for your critical systems. Our industry recognized “best-in-class” methodologies include kill chain analytics and cyber intelligence frameworks for proactive cyber defense. Our team is comprised of experienced practitioners who have operational experience securing global enterprises. This experience ensures that our recommendations are practical, effective, and efficient. We tailor each engagement to the client’s unique operating environment, people, and culture and never utilize a checklist approach to security.

## *Industries We Serve*

---

In a globally interconnected world, a growing number of industries are facing the challenges associated with cyber attacks. Companies face the risks of adversaries stealing intellectual property, criminals pursuing financial gain through fraud and identity theft, and attackers disrupting critical operations. At Revolutionary Security, our cyber security professionals leverage their expansive cross-industry experience and utilize their deep domain expertise to help our clients enhance and mature their cyber defenses to defend against these sophisticated threats. Our team has proven experience in the following industries:

 Chemical

 Law Firms

 Technology & Communication

 Financial Services

 Manufacturing

 Transportation

 Health & Life Sciences

 Oil & Gas

 Utilities

## Revolutionary Security Services

Service	Description
Strategic Consulting	We provide Strategic Consulting Services to advise boards of directors and executive leadership on the dynamic threat environment, organizational development, and investment prioritization. These services enable effective strategic planning, roadmap development, and management of cyber risk at the enterprise level.
Enterprise Transformation Services	Our Enterprise Transformation Services are focused on improving our clients' security and system resiliency, and transforming security across the enterprise. They are designed around advanced cyber defense frameworks and customized across a variety of organizational functions. These include Security Operation Centers (SOCs), Threat Intelligence Functions, Incident Response Programs, Red Teams, Blue Teams, Vulnerability Program, Enterprise Architecture, and IT & OT Integration.
SOC Transformation and Operations	We provide a spectrum of service engagement partnership models for Security Operation Center (SOC) Transformation & Operations. These include embedding analysts for knowledge transfer; expert residency to build out your cyber teams; and full outsourcing of security operations or functions.
Security Assessments & Strategy	We provide a broad range of security assessments to gauge the maturity and readiness of your enterprise to defend against cyber attacks, to identify and quantify risks, and to recommend options for mitigation. <b>Security Framework Assessments</b> are designed to evaluate the effectiveness of organizational security controls against established industry best practice frameworks, including NIST, C2M2, ISO, FFIEC and CERT Insider Threat. <b>Advanced Cyber Assessments</b> leverage advanced cyber defense frameworks to evaluate your organization's sustainability and resiliency to defend against, sustain, and recover from targeted attacks and to apply intelligence and analytical models to enhance the ability to utilize proactive cyber defense. <b>Industrial Control System Assessments</b> utilize proven methodologies, tools, and subject matter expertise to evaluate the security posture of your Industrial Control Systems, Process Control Networks, and SCADA environments and the risks in your Operational and Business Networks.
Enterprise Security Testing	Our Enterprise Security Testing Services identify vulnerabilities and provide comprehensive mitigation strategies. <b>Vulnerability Assessments</b> identify and quantify security vulnerabilities in your enterprise and provide mitigation measures to reduce risk and improve defensive resiliency. <b>Penetration Testing</b> , both internal and external, simulate attackers attempting to breach systems, networks, and applications with a focus on discovery of previously unknown vulnerabilities, and development of customized actions to mitigate the risk. <b>LiveFire® Advanced Threat Emulation</b> leverages sophisticated adversarial tactics, techniques, and procedures to map an organization's cyber defense capabilities, defensive resiliency, and response activities across people, process and technology to generate a comprehensive heat map of the residual threat landscape. Delivered with a series of tactical and strategic recommendations, LiveFire® enables the critical discussions on enterprise defensive depth by providing real-world adversarial detail well beyond the scope of an average penetration test.
Industrial Control Systems Security	Our Industrial Control System (ICS) Security services help our clients build and operate ICS security programs and technology across all phases of the lifecycle. This includes global assessments of your operational environment and strategic roadmaps for maturing operational security. We provide comprehensive ICS vulnerability management, testing, design, implementation, and operation of large-scale programs such as IT/OT/Physical SOC integration.
Incident Response & Remediation	Our Incident Response (IR) & Remediation services provide both pre- and post-intrusion and incident response actions to enable clients to contain, eradicate, mitigate and recover from high impact intrusions. These services include enhancement of current IR capabilities across people, process and technology to improve readiness and defensive resiliency against advanced cyber attacks.

### What to Expect

- ✓ Experienced Security Analysts
- ✓ Integrated SOC Processes and Procedures
- ✓ Defined Milestones and Progressive Value
- ✓ Proven Transformation Methodology and Approach
- ✓ Industry Best Practice Alignment and Beyond
- ✓ Unique insights from cross-industry experience
